

Net Dummy Plugin sample readme file

The Net Dummy Plugin sample setup package installs the net assemble plugin dlls and define all the registry keys required by InstallAware.

The Net Dummy Plugin sample setup package doesn't install the Net Bridge runtime dlls and these, have to be manually copied to the target Net Dummy plugin installation folder.

The NetBridge runtime dlls are distributed with InstallAware NX and are available with InstallAware Net Plugin template project.

The NetBridge runtime dlls once copied to the target Net Dummy plugin installation folder, must be renamed as follow to avoid any possible issue with any other Net Plugin used by InstallAware:

- "DesignTime_NetBridge.dll" renamed as "DummyIDE_NetBridge.dll"
- "RunTime_NetBridge.dll" renamed as "DummyRTM_NetBridge.dll"

The Net Dummy Plugin sample is ready to use and doesn't require any other operation to demonstrate its functionality.

The Net Dummy Plugin sample setup package includes the VS 2010 Net C# projects with full source code. The sample demonstrates, with very basic coding, how to handle InstallAware variables during plugin execution.

The sample requires version 4.0 of Net run-times framework.
The sample projects requires Microsoft® Visual Studio 2010.
